

The Nest Test

Birds build nests in trees. A bird's nest is his home. It is where he goes to rest. A bird can stay safe from pests in his nest. In a forest, you may find many trees with birds' nests. Some types of birds use the nest as a test. Wrens are one of them. The males build the nests. The female wrens will only go to the good nests. The nest must pass the test. In this way, it is almost like a contest. The male with the best nest gets the best female.
